\*Samples taken: 14 February 2022  
Samples received and analysed 14 February 2022  
Analysis completed: 16 February 2022  
Sample description: Water

Sample	Heterotrophic P/C per 1m <sup>l</sup> at 35°C	Total coliforms per 100 m <sup>l</sup>	Faecal coliforms per 100 m <sup>l</sup>	<i>E.coli</i> per 100 m <sup>l</sup>
Wynland Irrigation Water	12 100	7 800	±10	±10

Not tested/requested indicated by: (-)

Sample temperature: 26.0°C

**Ms ETHNÉ CARLSE  
MICROBIOLOGIST**

page 1 of 1

Accredited method/techniques used: Biochemical methods, WAL M1 (heterotrophic plate count); WAL M3 (faecal coliform); enzyme substrate, WAL M4 (E.coli). Chromogenic agar (ecoli-coliforms) method WAL M5

This report relates to the samples tested and identified in this report. The laboratory does not accept responsibility for the quality of the samples in terms of temperature during transit, age, etc. supplied to the laboratory or for comments added by another party. Test reports shall be reproduced in full and not only in part. Written approval must be obtained in writing from the Laboratory manager before certain parts of the report is published or reproduced. \* Indicate information supplied by customer. The Laboratory protects client's confidential information and proprietary rights by not allowing a third party access to data or any other client information unless agreed upon with customer. Laboratory will only provide data and confidential information when it is required by law or for accreditation authorities.

Please arrange with the laboratory BEFORE taking the samples. Bacteriological samples must be analysed within ± 6 hours with a maximum of 24 hours. Samples are therefore accepted by appointment only. Please allow two days for completion of the tests. This laboratory is normally closed on Public holidays, Saturdays and Sundays.
